

## **CREDIT CARD STATEMENT OF AGREEMENT**

### **STATEMENT OF AGREEMENT**

With the submission of the first electronic sales transaction and/or the first manual (paper) sales transaction, you, as Dealer, agree to comply with the terms and conditions set forth in this Marathon Petroleum Company Credit Card Handbook, with the rules and regulations of any non-Marathon credit card issuer, and, if using leased VeriFone equipment, with section H of this Marathon Credit Card Handbook or in any future revision of the Marathon Credit Card Handbook. Marathon shall have the right at any time to modify, alter, or change these procedures by written notification to the Dealer. All Dealers who desire to sell and assign to credit card sale invoices to Marathon must make, record and submit these sales in **FULL COMPLIANCE WITH THE FOLLOWING PAGES** herein.

You must ensure that your employees and, if applicable, your dealers, are familiar with and understand the rules, regulations, requirements and procedures as established by Marathon from time to time governing the use of credit cards, or other payment products. You must further ensure that each of your dealers have received or have access via Marathon's website to a Credit Card Handbook containing the latest revisions.

### **SOFTWARE UPGRADES**

All Marathon Dealers that process credit card sales for electronic submission to Marathon must use an electronic Point of Sale (POS) system that has been certified by Marathon. Dealers must use the latest software version as certified by Marathon for their system. From time to time, Marathon will make available new software versions for use with certified POS systems and Dealers will be required to update their system software to the latest version. Marathon will notify Dealers in writing about the availability of new software versions as well as required deadlines for making updates. Dealers who fail to update their system software by the required date will be charged the effective processing rate for paper-only locations until the system software is updated.
