

Important Notice on E-85 Dispenser Components

The Underwriters Laboratories Inc. (UL) recently suspended authorization to use UL markings on components for fuel dispensers that reference compatibility with alcohol blended fuels containing greater than 15% alcohol.

UL research indicates that high concentration of ethanol or other alcohols in blended fuels make the fuels significantly more corrosive. This may ultimately degrade the dispenser's ability to contain the fuel.

For more information, please click on the link below for the Underwriters Laboratories Inc. website: <http://www.ul.com/regulators/e85.cfm>

Marathon Petroleum Company will continue to offer E-85 blends at specified terminal locations; however, it is incumbent upon the retailer to ensure they are comfortable with the risk associated with the purchase and resale of this particular product. You may want to consult your insurer and local fire department for further direction.
